

PCNet, Inc. Launches New Trumbull, CT Data Center

PCnet, Inc. is pleased to announce the launch of its new data center in Trumbull, Connecticut. This first data center delivers a robust multipurpose data center offering colocation and cloud infrastructure solutions.

Trumbull, CT, June 08, 2011 --([PR.com](#))-- PCnet, Inc. is pleased to announce the launch of its new data center in Trumbull, Connecticut. This first data center delivers a robust multipurpose data center offering colocation and cloud infrastructure solutions. PCNet, Inc. has launched this data center initiative to meet the growing demand for data center services.

The PCNet, Inc. Data center is a SAS 70 Type II certified, operationally redundant data center with multiple Tier 1 Fiber Internet carriers, N+1 HVAC systems, UPS, and generator power backup systems. PCNet, Inc. has also integrated into its security framework campus-wide video surveillance, Two-factor biometric authenticated access, and its data center employees have been through a rigorous background screening process.

The PCNet, Inc. data center services are geared to meet the demands of businesses from Main Street through the Fortune 1000. All core offerings are developed to assist companies in increasing availability of their mission critical applications and data easily from anywhere, anytime, on any device in a safe and secure manner. PCNet, Inc. offers its cloud services under the pcnCloud brand and has partnered with VMware to deliver both pay-as-you-go and subscription based infrastructure solutions.

“There's a large and growing demand for data center services today, especially here in the Northeast,” states Erik Soto VP of Finance and Operations. “Data centers need to provide multi-faceted and flexible offerings to meet the agile needs of today’s business. Our colocation and cloud based services help our clients construct a solution that meets their individual, unique requirements.”

PCNet, Inc. also provides services beyond the data center including managed network services, professional services, and IT consulting. These services help companies with the design, delivery, and day-to day operational support of their IT systems. Each solution is created to meet the needs of the client.

“One of the differentiators that sets us apart in the marketplace is the ability to go beyond providing just data center facilities, but providing complete IT solutions,” states Brian Doyle, VP of IT and Datacenter Services. “Our team is experienced in designing and delivering complex IT solutions. Once your service is in place you can elect to have it fully managed by PCNet or have it supported by your IT department.”
