DEFINITIONS

Definition of Market Value¹

Market value is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, with the buyer and seller each acting prudently and knowledgeable, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and passing of title from seller to buyer under conditions whereby:

- a. The buyer and seller are typically motivated;
- b. Both parties are well informed or well advised and each acts in what he considers his own best interest;
- c. A reasonable time is allowed for exposure in the open market;
- d. Payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
- e. The price represents the normal consideration for property sold, unaffected by special or creative consideration or financing, or sales concessions granted by anyone associated with the sale.

HYPOTHETICAL CONDITION AND EXTRAORDINARY ASSUMPTION

An hypothetical condition is defined as:

A condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

Comment: Hypothetical conditions are contrary to known facts about physical, legal, or economic characteristics of the subject property; or conditions external to the property, such as market conditions or trends; or the integrity of data used in an analysis.

An extraordinary assumption is defined as:

an assignment-specific assumption, as of the effective date regarding uncertain information used in an analysis, which, if found to be false, could alter the appraiser's opinions or conclusions.

Comment: Uncertain information might include physical, legal, or economic characteristics of the subject property; or conditions external to the property, such as market conditions or trends; or the integrity of data used in an analysis.

FEE SIMPLE ESTATE OF INTEREST

Fee Simple Estate is the absolute ownership unencumbered by any other interest or estate; subject only to the limitations of eminent domain, escheat, police power and taxation.

MOST PROBABLE SELLING PRICE

The price at which a property would most probably sell if exposed on the market for a reasonable time, under the market conditions prevailing on the date of the appraisal.

MARKETING TIME

Marketing time is defined as the average amount of time necessary to expose a property to the open market and achieve a sale. Based upon information from local realtors, sellers and historical sales data, it is estimated that the subject could be sold within 12-24 months at the estimated value herein under market conditions existing as of the effective date of the appraisal.

EXPOSURE TIME*

The estimated length of time the property interest being appraised would have been offered on the market prior to the hypothetical consummation of a sale at market value on the effective date of the appraisal; a retrospective estimate based on an analysis of past events assuming a competitive and open market. Exposure time is always presumed to occur prior to the effective date of the appraisal.

Exposure time was estimated at 12-24 months.

DESCRIPTION OF THE IMPROVEMENTS

There are no improvements on the sites and no road or utilities

HIGHEST AND BEST USE

The Highest & Best Use is that use which would provide the greatest net return over a given period of time.

Highest & Best Use is defined as follows:

“The reasonably probable and legal use of vacant land or an improved property, which is physically possible, appropriately supported, financially feasible and results in the highest value. The four criteria the Highest & Best Use must meet are legal permissibility, physical possibility, financial feasibility and maximum profitability.”

Source: The Dictionary of Real Estate Appraisal

The Second Edition, 1989
American Institute of Real Estate Appraisers

A Highest & Best Use analysis requires an application of the four criteria cited within the above definition to the site as vacant and to the site as improved.

HIGHEST & BEST USE - AS VACANT

LEGALLY PERMISSIBLE

Legally permissible uses of land must consider zoning and building codes, governmental and deed restrictions and environmental factors which may preclude certain uses. The legally permissible uses to which this site may be developed are subject to applicable AA zoning and Trumbull building codes. There are no known deeds, governmental or environmental restrictions.

PHYSICALLY POSSIBLE

Physically possible uses of land must consider the size, shape, soil and topography availability of utilities and subsoil conditions of the site. The utility of the use of the site depends upon these characteristics.

The subject sites combined are approximately 1.81 acres. They are all rectangular shaped parcels and on a paper road, with sloping topography with no access to public utilities. Subsoil conditions are unknown.

FINANCIALLY FEASIBLE

After the legally permissible and physically possible uses are determined, that use which generates an income equal to, or greater than, that necessary to amortize debt and pay operating expenses is concluded to be financially feasible.

MAXIMUM PROFITABILITY

The maximally productive use of this site is that financially feasible use which will provide the greatest net return over a given period of time.

HIGHEST & BEST USE “AS VACANT” CONCLUSION

The Highest & Best Use of the subject land, as vacant, is concluded to be for open space development subject to applicable AA zoning requirements.

HIGHEST & BEST USE AS IMPROVED CONCLUSION

The same four criteria are applied in determining the Highest & Best Use of the subject property as improved. In my opinion, that use is its present use as private open space. It is legally permissible relative to AA zoning, physically possible because it exists, financially feasible because of availability of funds, and maximally productive considering the size and location of the site.

HIGHEST AND BEST USE

A property's highest and best use is the foundation upon which the entire valuation rests. A study of the highest and best use identifies that property use which is the most profitable for which the property can be put, at a certain point in time. Highest and best use, as used in this report, is defined as: "The reasonably probable and legal use of vacant land or an improved property, that is physically possible, appropriately supported, and financially feasible and that results in the highest value".²

APPROACHES TO VALUE DEFINITIONS

There are three traditionally accepted approaches to the valuation of real estate. These approaches are defined as follows:

COST APPROACH - Approach through which an appraiser derives a value indication of the fee simple interest in a property by estimating the current cost to construct a reproduction or replacement for the existing structure, deducting for all evidence of accrued depreciation from the cost new of the reproduction or replacement structure, and adding the estimated land value plus an entrepreneurial profit. Adjustments may be made to the indicated fee simple value of the subject property to reflect the value indication of the property interest being appraised.

DIRECT SALES COMPARISON APPROACH - Approach through which an appraiser derives a value indication by comparing the property being appraised to similar properties that have been sold recently, applying appropriate units of comparison and making adjustments, based on the elements of comparison to the sales prices of the comparables.

INCOME CAPITALIZATION APPROACH - Approach through which an appraiser derives a value indication for income-producing property by converting anticipated benefits, i.e., cash flows and reversions, into property value. This conversion can be accomplished in two ways: One year's income expectancy or an annual average of several years' income expectancies may be capitalized at a market-derived capitalization rate or a capitalization rate that reflects a specified income pattern, return on investment, and change in the value of the investment; secondly, the annual cash flows may be discounted for the holding period and the reversion at a specified yield rate.

SALES COMPARISON APPROACH TO VALUE

Methodology

The Sales Comparison Approach produces an estimate of value by comparing recent sales of similar properties in the surrounding or competing area to the subject property. Inherent in this approach is the principle of substitution which holds that “when a property is replaceable in the market, its value tends to be set at the cost of acquiring an equally desirable substitute property, assuming that no costly delay is encountered in making the substitution.”

By analyzing sales, which qualify as arms-length transactions between willing, knowledgeable buyers and sellers with reasonable market exposure, I can identify price trends from which value parameters may be extracted. Comparability in physical, locational and economic characteristics is an important criteria in evaluating the sales in relation to the subject property. The basic steps involved in the development of this approach are as follows:

- (1) Researching recent relevant property sales throughout the competitive area.
- (2) Analyzing the selected comparable sale properties concerning time of sale and any change in economic conditions which may have occurred to the date of value; locational factors such as ease of access and proximity to public transportation and highways; age; condition; physical, functional and economic characteristics and any other relevant factors of comparison.
- (3) Reducing the sale price to common units of comparison (i.e., price per square foot of building area).
- (4) Making estimated adjustments to the comparable properties as they compare to the subject property.
- (5) Interpreting the adjusted sales data and reaching a market reflective conclusion.

Analysis and Conclusions

In my research and analysis of the market for improved properties with characteristics similar to those of the subject, I have attempted to gather what I consider relevant data so that reasonable comparisons could be made.

Comment on cost approach:

The cost approach combines an estimate of land value with an estimate of depreciated reproduction or replacement cost of the improvements. The principle of substitution is the basis of the cost approach, in that no rational person will pay more for a property than the amount for which he can obtain, by purchase of a site and construction of a building, with undue delay, a property of equal desirability and utility.

SALES COMPARISON APPROACH CONCLUSION/VALUE

The quality and quantity of the comparable sales data is rated good. All sales have been analyzed as they compare to the subject property and all elements of comparison have been considered. The estimated adjustment to the sales data result in an adjusted sales price per sq. ft. range between \$ 0.23 and \$ 0.33 with an average sales price per sq. ft. of \$ 0.27. After careful consideration, it is my opinion that the subject property has a supportable per square foot value of \$ 0.27.
