This Siena Poll was conducted May 4 - 8, 2026, among 654 Trumbull, CT Residents. Of the 654 respondents, 316 were contacted through a dual frame (landline and cell phone) mode and 338 completed via text to web. Telephone calls were conducted in English and respondent sampling was initiated by asking for the youngest person in the household. Telephone sampling was conducted via a stratified dual frame probability sample of landline and cell phone telephone numbers weighted to reflect known population patterns. Both the landline telephone sample and the cell phone sample were obtained from MSG.

Data from collection modes was statistically adjusted by age, party, race/ethnicity, income, and gender to ensure representativeness. It has an overall margin of error of +/- 4.5 percentage points including the design effects resulting from weighting. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll.
