This item shall be part of a multi-step process of asphalt surface rehabilitation that consists of softening the existing flexible pavement with heat and thoroughly stirring spinning or tumbling the mixture, applying an asphalt rejuvenator, milling/remixing or auguring, reshaping and compacting the hot in-place recycling surface. Installing a surface treatment or overlay is a separate and/or concurrent function of this work.

Bid Price is to include all labor, materials, tools, equipment, plant, mobilization, permits, insurances, etc., required to properly complete this work.

**Equipment Requirements**

- A. Preheaters: The preheating machines shall be specifically designed to heat the upper layers of the existing asphaltic pavements. The preheating machines shall be self-propelled and completely self-contained units capable of operating at speeds from ten (10') feet to twenty-five (25') feet per minute while uniformly heating the existing surface of the asphalt.
- B. Heater-Scarifier: The heater-Scarifier machine shall be one self-contained machine specifically designed to reprocess upper layers of existing asphalt pavements. The heater-Scarifier machine shall be a self-propelled and completely self-contained unit capable of operating at speeds from ten (10') feet to twenty-five (25') feet per minute while uniformly heating, scarifying, applying rejuvenator, mixing, and screening the existing pavement to a minimum depth of one (1") to one and one half (1 ½") inches at a minimum temperature of 250 degrees Fahrenheit. The wheel base shall not be less than eighteen (18') feet and the total weight shall not be less than 35,000 pounds.
- C. Scarifying Unit: The scarifying unit consists of no less than two (2) rows of spring loaded, adjustable in width from eight (8') feet to fourteen (14') feet in increments to (1") inch and construction in one (1') foot sections to conform to the pavement contour to insure penetration of the teeth and prevent damage to utility structures.
- D. Rejuvenation: Immediately behind the teeth of the scarifying unit, an application of rejuvenator shall be applied to the newly remixed area. The approved rate of application according to the forward speed of the machine in conjunction with discretion of Highway Superintendent. The tank on the machine shall be heated, and the heating unit on the storage tank for rejuvenator shall be thermostatically controlled to maintain an even specified temperature.
- E. Screed and Initial Compaction Unit:
  - i. Screed: The hot scarified material shall be uniformly distributed to the desired longitudinal and transverse section by the use of a heated, augured vibratory screed. The screed must be equipped with an adjustable crown control, and each end of the screed must have handwheel adjusting screws for providing the desired longitudinal and transverse section.
  - ii. Compaction Unit: Immediate compaction shall take place with rolling equipment of sufficient type and size to compact the recycled bituminous material to the required den-

sity. Normally this can be accomplished with the application of an eight (8) to twelve (12) ton vibratory roller. State specifications for bituminous concrete surfaces shall apply.

### **Construction Requirements**

- A. Pavement Preparations: The entire area to be resurfaced shall be cleaned of all deleterious material. If required, the owner shall broom clean the area prior to commencement of work or specify the contractor to do the same. The Town will provide traffic control.

Under no circumstances shall the scarifying teeth penetrate into the existing base. The heated rejuvenator shall be applied immediately following the scarifying teeth. The rejuvenator is specifically formulated for use with the hot in-place recycling, and therefore, shall not be substituted. The hot scarified material shall then be remixed immediately following the application of the recycling agent to eliminate premature compaction of the hot recycled asphalt resulting in final differential compaction and to the desired longitudinal and transverse section by the use of an attached, heated, augured screed. Directly behind the screed process shall be an eight (8) to twelve (12) ton roller for compaction.
- C. Overlay: The application of the final wearing surface consisting of either hot mix asphalt pavements, nova-chip, micro-paving, or chip seals follow after a prescribed interval or delay. These materials are applied with conventional equipment in conformance with standard construction methods. Note: Surface treatment not included in unit price.

### **Method of Measurement**

Asphalt recycling performed and application of rejuvenating agent shall be measured by the square yard (SY).

### **Basis of Payment**

Prices shall include all labor, equipment, materials, fuels, supplies, rejuvenating agent, mobilization, bond and insurance required to complete the above item. Payment for heating, scarifying, application or rejuvenating agent, milling/remixing, and compaction will be made at the price bid per square yard.
